## INTRODUCING THE VELscope Mantis

VELscope Mantis is a state-of-the-art oral mucosal examination tool to assist the dental professional in performing comprehensive oral examinations. The Mantis integrates both traditional white light visualization, polarized white light visualization and blue-light-induced fluorescence visualization into the same device.

PRICE  
**\$2,994.99** ea.

## Innovative Multi-Mode System for Versatile Oral Screening + Discovery

**Non-Polarized  
Light**

Non-polarized white light visualization is the traditional method for examining tissue, providing a combination of surface reflections that highlight texture and topography, along with color variations that indicate the state of the underlying tissue.

**Polarized  
Light**

Polarized white light visualization excels at showing subtle colour tissue changes by improving colour response and eliminating surface reflections that can be distracting and obscure underlying tissue.

**Fluorescent  
Light**

The new VELscope Mantis builds upon its predecessors by increasing field of view and enhancing filtering for a brighter, improved image with increased yellow/orange spectral content.
